Scenario

Paul works in the CCTV operating and security department of his local police force. He knows how a computer works and can operate around CCTV cameras, however, he's not familiar with advanced skills such as photo editing or complex software. He spots a person in an image but can't quite make out who it is. He requires a solution where he can upload the image to detect the same face and enhance it so it becomes clearer.

As a CCTV Operator, Paul wants an app that:
- Detects Faces clearly
- Enhances them
- Allows him to export the enhanced image
